Risk Profile

Low Low-Medium Medium Med-High High

This risk profile is based on the intended investment strategy and permitted asset classes. The risk category shown is not guaranteed and may change over time. There may be other special areas of risk relating to the investment. The risk indicator does not imply that the portfolio is suitable for all types of investors. The manager and investment manager do not render financial advice. You are advised to consult your financial advisor to determine the appropriateness of the product for your portfolio.

Commentary

The long overdue correction in stocks characterized the month of April. Many single stocks experienced a pullback greater than 10% but the S&P 500 and Nasdaq 100 had maximum drawdowns of -6.6% and -7.6% respectively; this indicates that momentum is still to the buy side and the dip provides a good entry point for further upside gains.

The month kicked off with comments from Federal Reserve officials suggesting the central bank is in no rush to begin lowering policy rates and led markets to scale back rate-cut expectations. The initial sell-off gained momentum amid broad risk-off sentiment sparked by renewed geopolitical concerns in the Middle East and Minneapolis Fed President Neel Kashkari's comment on the possibility of no rate cuts this year also added to market anxiety.

The US economy continued to show signs of strength with another Non-Farm Payrolls report exceeding expectations and a third consecutive month of stronger-than-expected US inflation data saw markets reprice expectations on the Federal Reserve's path to cut interest rates this year.

US equities have had an impressive start to the year. The S&P 500 logged 22 all-time highs in the first quarter, the most since 1998. The current rally is underpinned by strong AI-related fundamentals relating to broadening demand trends, new revolutionary products and increasing adoption. The Q1 performances of META, MSFT and GOOGL and the comments on continued capital expenditure on AI provided a boost for investor sentiment and market reaction could signal that the pullback is all but over and the broader market will resume its upward trajectory to more all-time highs.

With the focus so much on AI related stocks, we are of the opinion that the Magnificent 6 will continue to underpin the indices with the potential of being crowded trades; this concentration should create demand for these and other AI-related stocks and we believe this is where momentum will be in the short-term.

Please note: The above commentary is based on reasonable assumptions and is not guaranteed to occur.

Minimum Disclosure Document - Class 1

Portfolio Valuation & Transaction Cut-Off

Portfolios are valued monthly. The cut off time for processing investment subscription is 10:00am on the last business day of the month prior to enable processing for investment on the first business day of the next month

Total Expense Ratio & Transaction Costs

Higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER.

Fund Risk

Volatility Risk: Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.

Concentration and Sector Risk: A large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a portfolio will material impact the returns of the portfolio more so than diversified portfolios.

Equity Risk: Applies to investment in shares or derivatives based on shares. The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares. Equity risk can either be systematic risk which is risk to the entire market based on political and economic indicators or unsystematic risk which is company specific and includes risk relating to company profits, future prospects and general consensus on the company or sector.

Interest Rate Risk: The values of bonds and other debt securities are inversely proportional to the change in interest rates. Interest rate risk is generally greater for investments with longer maturities as well as when the market does not expect a change in the interest rates

Credit Default Risk: The risk that the government entity or company that issued the bond will run into financial difficulties and won't be able to pay the interest or repay the principal at maturity. Credit risk applies to debt investments such as bonds. The higher credit rating the less likely the possibility of the issuing company defaulting.

Currency/Exchange Rate Risk: Assets of a fund may be denominated in a currency other than the Base Currency of the fund and changes in the exchange rate between the Base Currency and the currency of the asset may lead to a depreciation of the value of the funds assets as expressed in the Base Currency.

Glossary

Net Asset Value (NAV): means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.

Annualised Return: is the weighted average compound growth rate over the performance period measured

Highest & Lowest Return: The highest and lowest rolling twelve-month performance of the portfolio since inception

Total Expense Ratio (TER): reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's.

Transaction Costs (TC): is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns

Total Investment Charge (TIC): should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.

Total Investment Charges (TIC%) = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Derivative: A contract that derives its value (positive or negative) from another asset.

Mandatory Disclosures

Collective Investment Schemes are generally medium to long-term investments. The value of participatory interests (units) may go up as well as down. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. A schedule of fees, charges, minimum fees, and maximum commissions is available on request from FundRock Management Company (RF) (Pty Ltd" (the manager"), as well as a detailed description of how performance fees are calculated and applied. The manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the fund may place the fund under liquidity pressure and in such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commission and incentives may be paid, and if so, are included in the overall costs. Portfolios may be closed to new investors to manage it more efficiently in accordance with its mandate. Prices are published monthly on the manager's website. Additional information, including Key Investor Information Documents, Minimum Disclosure Documents, as well as other information relating to the portfolio is available, free of charge, on request from the manager. The manager retains full legal responsibility for any third party-named portfolio. Portfolio performance is calculated on a NAV-to-NAV basis with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ because of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. Investors should note that the value of an investment is dependent on numerous factors which may include, but are not limited to, share price fluctuations, interest and exchange rates and other economic factors. Past performance is not indicative of future performance. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. The Investment Manager ensures fair treatment of investors by not offering preferential fee or liquidity terms to any investor within the same strategy.
